Wiki at : History. The concept, which had some attraction in certain historical circles, saw its peak with the Renaissance. More generally, in post-classical archaeology, the term "universal history" can refer to the study of events in all time periods. Archaeology, Roman Coins, Series I, The Byzantine Period from Constantine to Andronicus - Chapters 1-35, Books 1-4, Italian Texts, 15th Edition, Alton Brown on Archaeology, Exhibits and Events, Archaeological Excavations, Models, Plans, Tracing and Templates, Featured Articles, News, and more! Oct 26, · Fascism in Italy; Nazi Germany: A History of Its Rise, Fascist Parties, Its Structure and Support. Another common phrase, which never refers to the period under study, is the phrase "the past is another country". The title of a book by Paul Johnson. The term is not commonly used in the English-speaking world, but it is sometimes used by historians and archaeologists in Italy, France and Germany. In post-classical archaeology, the term "universal history" can refer to the study of events in all time periods. Thanks to Thomas Suddendorf for this. The title of a book by Paul Johnson. Domenico Quirico. This invention began to shape historiography. WASHINGTON — NASA's Dawn spacecraft will spend the next few weeks circling a strange giant asteroid. Dawn will swoop around Vesta, one of the brightest and largest asteroids in the main belt, starting on June 29, NASA said in a statement. It will be the first time in mission history that a spacecraft has orbited two objects in this region. At its closest approach on July 7, the Dawn will fly as close as 6,500 miles (10,000 kilometers) to Vesta, and will pass to the right of the asteroid, near its South Pole. Dawn will not arrive at Vesta until the following month. NASA said the new orbit allows it to fly around the icy celestial body with a lower altitude and to more thoroughly study its surface. In September, Dawn will begin orbiting another object in the main belt, Ceres, which is about 790 miles (1,250 kilometers) wide. The mission will seek to answer basic questions about the evolution of the solar system and the birth of our solar system's planets. The spacecraft has already returned the first high-resolution images of a protoplanet.
